Preface	v
1 Introduction	1
1.1 Recapitulation	1
1.1.1 Notation and vector relations	1
1.1.2 Equations and concepts for fluid flow	3
1.1.3 Boundary conditions	6
1.2 The contents and purpose of the course	7
1.3 Problems	8
2 Continuation of the basics	9
2.1 Streamlines, particle paths, and streaklines	9
2.2 Bernoulli's equation for a nonstationary potential flow	13
2.3 Vorticity and circulation	14
2.3.1 Examples of flow fields with vorticity and circulation	14
2.3.2 The vorticity equation and vortex lines	15
2.3.3 The Kelvin-Helmholz circulation theorem	18
2.4 Energy and momentum flow density for a compressible fluid	19
2.5 The impulse-momentum principle:	22
2.6 Energy dissipation in a viscous incompressible fluid	22
2.6.1 Perturbative calculation for a potential flow	23
2.7 Validity of the assumption of a incompressible fluid	24
2.8 Problems	26
3 Flow regimes and equations of motion	29
3.1 The Navier-Stokes equation on dimensionless form	29
3.2 Low Reynolds numbers: Creeping flow	30
3.3 High Reynolds numbers: Nonviscous flow	31
3.3.1 Validity of Euler's equation and of the potential flow approximation	33
3.4 Problems	34
4 Viscous flow: Stokes's law	35
4.1 Simple solutions of the Navier-Stokes equation	35
4.2 Creeping flow past a sphere	36
4.2.1 Solution for velocity and pressure	36
4.2.2 The drag force: Stokes's law	40
4.2.3 Limitations of validity	42

4.3	Problems	44
5	Potential flow: Surface waves on a liquid	45
5.1	Potential theory	45
5.2	Combined gravity and capillary waves	46
5.2.1	Assumptions and simplifications	46
5.2.2	Equations and solution	47
5.2.3	The minimum of the phase velocity	50
5.2.4	The motion of the liquid particles	51
5.3	The group velocity of surface waves	54
5.4	Dissipation of surface waves	56
5.5	Ship waves: Kelvin's limit angle	58
5.6	Problems	61
6	Shock analogies	63
6.1	The hydraulic jump as a shock wave analogy	63
6.1.1	Critical flow	67
6.2	Solitary waves, briefly	69
6.3	Problems	75
7	Lift and drag: Paradoxes of nonviscous flow	77
7.1	Forces on bodies in a flowing fluid	77
A	Relations for the ∇ operator	179
A.1	Proofs of the product relations in Chapter 1	179
A.2	Expressions in curvilinear coordinates	181
B	Derivation of the Navier-Stokes equations	183
B.1	The stress tensor	183
B.2	The angular deformation velocity tensor	183
B.3	Newtonian fluid	185
C	Some thermodynamical relations	187
D	Polar and axial vectors	189
E	Waves	191
E.1	Elementary plane-wave formalism	191
E.2	Group velocity	192
F	Surface tension and capillary pressure	195
G	Multidimensional Fourier integrals	197
H	Department for tricks	199
